This introductory general ecology text features a strong emphasis or helping students grasp the main concepts of ecology while keeping the presentation more applied than theoretical. An evolutionary

perspective forms the foundation of the entire discussion. Evolution is brought to center stage throughout the book, as it is needed to support understanding of major concepts. The discussion begins with a brief introduction to the nature and history of the discipline of ecology, followed by section I, which includes two chapters on natural history--life on land and life in water. The intent is to establish a common foundation of natural history upon which to base the later discussions of ecological concepts. The introduction and natural history chapters can stand on their own and should be readily accessible to most students. They may be assigned as background reading, leaving 17 chapters to cover in a one-semester course. Sections II through VI build a hierarchical perspective: section II concerns the ecology of individuals; section III focuses on population ecology; section IV presents the ecology of interactions; section V summarizes community and ecosystem ecology; and finally, section VI discusses large-scale ecology and includes chapters on landscape, geographic, and global ecology. These topics were first introduced in section I within a natural history context. In summary, the book begins with the natural history of the planet, considers portions of the whole in the middle chapters, and ends with another perspective of the entire planet in the concluding chapter.

The 4ce places great emphasis on helping students grasp the main concepts of ecology while keeping the presentation more applied than theoretical. Fully integrated Canadian content makes the material relevant to students' lives, highlights the contributions Canadian researchers have made in the field of ecology and will prepare students to appreciate our unique Canadian environment in a global context. Each chapter is organized around two to six major concepts, presenting the student with a manageable and meaningful synthesis of the subject. This resource was created for students who are taking their first undergraduate course in ecology. Ecology is an integrative discipline, and thus a foundation in other sciences is important. We have assumed that students in this course have some knowledge of basic chemistry and mathematics and that they have had a course in general biology that included introductions to physiology, biological diversity, and evolution. McGraw-Hill Connect is an award-winning digital teaching and learning platform that helps students get better results, learn and study more efficiently; while helping instructors to increase student engagement, save time with course management, and improve overall course retention. Connect includes SmartBook, the first and only adaptive reading experience that changes reading from a passive and linear experience, to an engaging and dynamic one. Students' retain more concepts and come to class better prepared. Connect access is available for students to purchase separately, or available to package with the print text.
