Otherwise we continue the process. The process must end because G is finite, so G contains a cycle. (a) implies (b): Since T is connected and contains no cycles, the claim implies that there exists a vertex of degree 1 in T . 'We delete this vertex and the attached edge from T , and the remaining object T. is still a connected graph with no ...

2.33 A two-dimensional Poisson process is a process of events in the plane such that (i) for any region of area \(A\), the number of events in \(A\) is Poisson distributed with mean \(\lambda A\), and (ii) the numbers of events in nonoverlapping regions are independent. Consider a fixed point, and let \(X\) denote the distance from that point to its nearest event, where distance is measured in ...

I want to know if the book introduction to stochastic processes by Gregory F. Lawler has solution manual or not. I could find a lot of links claiming that on their website we can find the solution manual but non of them were valid. Also, I checked the Amazon website but I couldn't find any explanation about solution manual of this book.

Galton-Watson tree is a branching stochastic process arising from Fracis Galton's statistical investigation of the extinction of family names. The process models family names. Each vertex has a random number of offsprings. The figure shows the first four generations of a possible Galton-Watson tree.
