Luc Ferry ’ s A Brief History of Thought (2011) is a very pretty piece of humanism in which he notes that philosophy is a search for salvation. The author surveys five major eras, or “ great moments, ” of thought: early Greek dominance, the Christian middle ages, the Enlightenment that birthed modern philosophy, postmodernity, and the present stage “ after deconstruction. ” .

From the timeless wisdom of ancient Greece through to Christianity, the Enlightenment, existentialism and postmodernism, A Brief History of Thought brilliantly and accessibly explains the enduring teachings of philosophy - including its profound relevance in today’s world as well as its essential role in achieving happiness and living a meaningful life.This lively journey through the great thinkers challenges every one of us to learn to think for ourselves and asks us the most important question of all: how can we live better?

From the ordered universe of the ancient Greeks to the shadows of Nietzsche's nineteenth century, LEARNING TO LIVE shakes the dust from the history of philosophy and takes us on a fascinating journey through more than two millennia of humanity's search for understanding - of the world around us and of each other. Both a sparkling and accessible history of Western thought, and a courageous dissection of how religion and philosophy have converged and clashed through the ages, Luc Ferry's blueprint for a new humanism challenges every one of us to learn to think for ourselves, and asks us the most important question of all: how can we live better?

Has inquiry into the meaning of life become outmoded in a universe where the other-worldiness of religion no longer speaks to us as it once did, or, as Nietzsche proposed, where we are now the creators of our own value? Has the ancient question of the "good life" disappeared, another victim of the technological world? For Luc Ferry, the answer to both questions is a resounding no. In What Is the Good Life? Ferry argues that the question of the meaning of life, on which much philosophical debate throughout the centuries has rested, has not vanished, but at the very least the question is posed differently today. Ferry points out the pressures in our secularized world that tend to reduce the idea of a successful life or "good life" to one of wealth, career satisfaction, and prestige. Without deserting the secular presuppositions of our world, he shows that we can give ourselves a richer sense of life's possibilities. The "good life" consists of harmonizing life's different forces in a way that enables one to achieve a sense of personal satisfaction in the realization of one's creative abilities.

All the great ideals that gave life meaning in earlier societies - God, the nation, revolution, freedom, democracy - are in disarray today, questioned by many and rejected by those who have lost faith in them. But there is another value, rooted in the birth of the modern family and in the passage from traditional to modern marriage, that has transformed our lives in profound and often unrecognized ways: love. It affects not only our personal lives but many aspects of our social and collective life too, from art and education to politics. In this book Luc Ferry shows how the quiet rise of love as the central value in modern societies has created a new principle of meaning and a new definition of the good life that requires a completely different kind of philosophical thinking. It forms the basis for a new philosophy for the twenty-first century and a new kind of humanism for the modern world - not a humanism of reason and rights, but a humanism of solidarity and sympathy. The ideal that this new humanism realizes is no longer that of nationalisms and revolutions, of the perpetrating of organized violence in the name of deadly principles that are pursued over and above humanity. Rather, it is about preparing and ensuring a future for those we love most: our future generations.

Because contemporary political philosophy owes a significant debt to the great nineteenth-century German philosophies of history, a sound knowledge of German Idealist philosophy is crucial to an understanding of our own time. In Political Philosophy 2, Luc Ferry provides not only a thorough introduction to German Idealism and its critics, but also an insightful look at contemporary political philosophy. Ferry begins this second volume of his ambitious three-volume Political Philosophy by considering both the structure and the potential political effects of the various philosophies of history born of German Idealism. He focuses on the key question of whether, and to what extent, the principle of reason may be said to govern the totality of the historically real. This leads to an examination of Hegel's criticism of the moral view of the world and to an assessment of the phenomenological criticism of Hegel put forth by Heidegger and Arendt.

With the publication of French Philosophy of the Sixties, Alain Renault and Luc Ferry in 1985 launched their famous critique against canonical figures such as Foucault, Derrida, and Lacan, bringing under rigorous scrutiny the entire post-structuralist project that had dominated Western intellectual life for over two decades. Their goal was to defend the accomplishments of liberal democracy, particularly in terms of basic human rights, and to trace the reigning philosophers' distrust of liberalism to an "antihumanism" inherited mainly from Heidegger. In The Era of the Individual, widely hailed as Renault's magnum opus, the author explores the most salient feature of post-structuralism: the elimination of the human subject. At the root of this thinking lies the belief that humans cannot know or control their basic natures, a premise that led to Heidegger's distrust of an individualistic, capitalist modern society and that allied him briefly with Hitler's National Socialist Party. While acknowledging some of Heidegger's misgivings toward modernity as legitimate, Renault argues that it is nevertheless wrong to equate modernity with the triumph of individualism. Here he distinguishes between individualism and subjectivity and, by offering a history of the two, powerfully redirects the course of current thinking away from potentially dangerous, reductionist views of humanity. Renault argues that modern philosophy contains within itself two opposed ways of conceiving the human person. The first, which has its roots in Descartes and Kant, views human beings as subjects capable of arriving at universal moral judgments. The second, stemming from Leibniz, Hegel, and Nietzsche, presents human beings as independent individuals sharing nothing with others. In a careful recounting of this philosophical tradition, Renault shows the resonances of these traditions in more recent philosophers such as Heidegger and in the social anthropology of Louis Dumont. Renault's distinction between individualism and subjectivity has become an important issue for young thinkers dissatisfied with the intellectual tradition originating in Nietzsche and Heidegger. Moreover, his proclivity toward the Kantian tradition, combined with his insights into the shortcomings of modernity, will interest anyone concerned about today's shifting cultural attitudes toward liberalism. The past fifteen years in France have seen a remarkable flourishing of new work in political philosophy. This anthology brings into English for the first time essays by some of the best young French political thinkers writing today, including Marcel Gauchet, Pierre Manent, Luc Ferry, and Alain Renault. The central theme of these essays is liberal democracy: its nature, its development, its problems, its fundamental legitimacy. Although these themes are familiar to American and British readers, the French approach to them—which is profoundly historical and rooted in the tradition of continental philosophy—is quite different from our customary one. Included in this collection is a series of reconsiderations of French critics of liberal society (Lévi-Strauss, Foucault, Bourdieu) and of classical European liberals (Kant, Constant, Tocqueville). The continuing controversies over the nature of the modern era and the place of religion within it play a central role throughout the collection. The book includes a debate on the foundations of human rights and on the nature of a liberal political order. The concluding section presents some of the new sociological writing on modern individualism, its pleasures and its discontents. An introduction by Mark Lilla provides the historical background to the revival of French political thought about liberalism, and offers an analysis of what American and English readers might learn from it.
