Coteaching is two or more teachers teaching together, sharing responsibility for meeting the learning needs of students and, at the same time, learning from each other. Working as collaborators on every aspect of instruction, coteachers plan, teach and evaluate lessons together. Over the past decade, because coteaching can be highly beneficial to both students and teachers it has become an increasingly important element of science teacher education and is expanding into other content areas and educational settings. This edited book brings together ten years' work on the research and the practice of coteaching and its impact on teaching and learning, predominantly in the sciences. It includes contributions from Europe, United States and Australia and presents an overview of theory and practice common to most studies.

The purpose of this project was to increase students' effectiveness in multi-step problem solving in mathematics through breaking a multi-step word problem into smaller pieces that could then be taken one step at a time using an explicit approach called the FLICK-it Approach. Through using this strategy, students' understanding of the problem and their confidence in solving would increase when facing multi-step word problems, allowing for the development of more effective problem solving skills. The researcher based this project on research-supported principles of explicit instruction used as a tool to assist students in solving multi-step word problems, and on the evidence that confidence in math is a major indicator in success in mathematical problem solving. Time was set aside for solving problems using this explicit approach four days a week, including time to create resource pages that would be used within the context of the FLICK-it Approach.
